

February 2, 2018: Week 21

This week, students learned about the different Layers of the Earth. Students made a foldable to represent each layer. Thursday was a fun day for students as they built their own Earth model using an apple, strawberry syrup and a skittle! Students had a blast as they compared each layer of earth to the layers in an apple. And of course, they were able to eat their apple at the end, who doesn't love a good apple?

(Check out a few pictures under the photo gallery tab!)

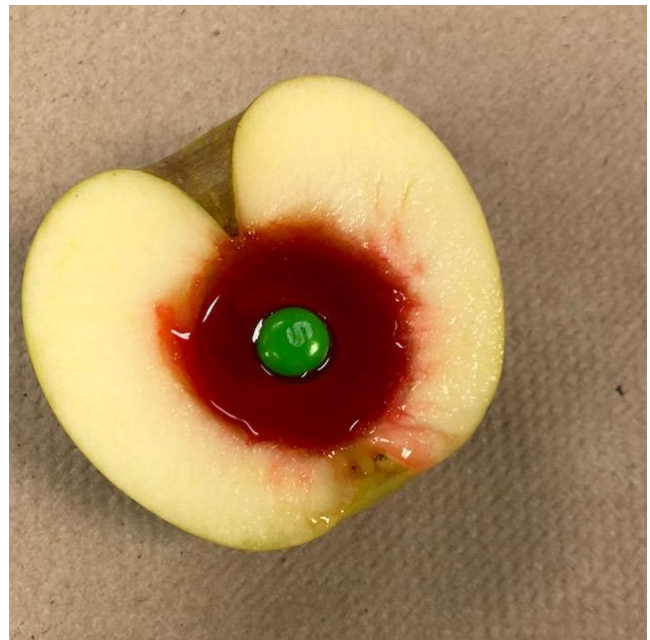

Next week, students will dive even further into the layers as we talk about tectonic plates in our lithosphere.

Next Week in Science:

- Monday:** Layers of the Earth QUIZ
- Tuesday:** Tectonic Plates
- Wednesday:** Tectonic Plates Reading
- Thursday:** Plate Boundaries
- Friday:** COMPUTER LAB

VOCABULARY:

Asthenosphere Transform
Convection Current Divergent
Lithosphere Convergent
